20th anniversary LIMITED EDITION 1990 - 2010

For this special occasion we have made a limited edition of 20 gold anodised vises (individually numbered) each complete with a comprehensive set of accessories in a soft case.

Contents include:

Gold MASTER vise, Gold BASE system, Profile Plate, bobbin rest, waste/trash bin, accessories support, and daylight lamp with tool rack.

This limited edition package is only available on www.petitjean.com until stocks run out.

PETITJEAN
FISHING EQUIPMENT SA

Award
Ka-Ching 2008, American Angler – USA

Fold-down tray with pockets
for 180 flies and 3 half-boxes included

FV200 "Just One"
Regular

Padded garment in 2 sections
2 sunglasses pockets with zingers
1 Tray unit with 3 small pockets
2 box units with adjustable compartments
1 large unit on the back for gear
1 Strap system

MP Life Vest

The "MP Life Vest" can be used on its own over your normal clothing when wading, boating, or sailing, etc.

FV200 - adapted
for Wading

FV200 - adapted
for Light Wading

The front section of the FV-200 fishing vest can be attached to the MP Life Vest by use of simple snap-on connectors.

Both front and back sections of the FV-200 fishing vest can also be attached to the MP Life Vest when more gear needs to be taken.

FV200, MP Life Vest

Unique design based on zipped, detachable units, the vest can easily be customized for various fishing situations:

For long day's fishing, the Regular jacket can be worn so that you have maximum capacity for all your gear, food and water, etc.

For deep wading, turn up the pockets and place the foldable tray on front.

For light wading, the smaller section with the foldable tray fits neatly onto your waders

Safety Regulations are becoming stricter these days in most water sports, including fishing.

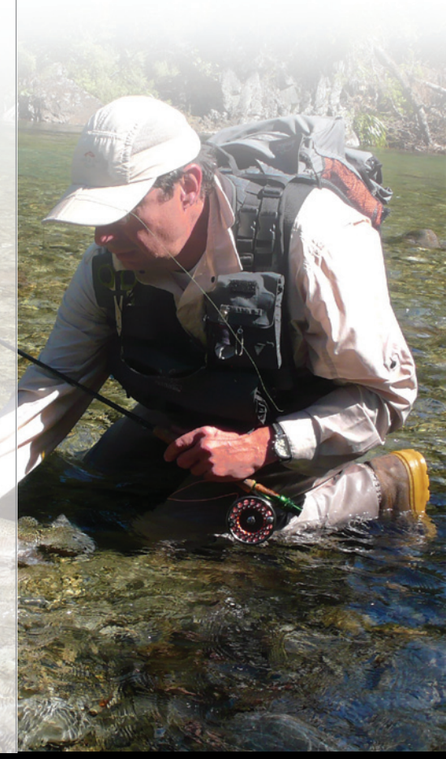
Having to wear a fishing vest plus a life vest can be very uncomfortable.

Our **MP Life Vest** is specifically designed to overcome this problem. It inflates automatically, whenever needed.

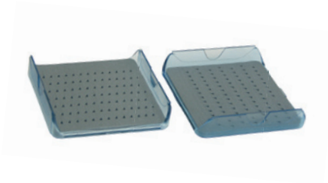
The MP Life Vest can be worn on its own, or you can attach one or more sections of the FV-200 fishing vest to carry extra gear should you need it – it's so versatile!

The MP-Life Vest can be used on its own; the vest conforms to the ISO 12402-3 ANNEX ZA Level 150 N norm.

The MP-Life Vest uses standard replacement gas cartridges found in most water sport shops or purchased from us.



Fly Boxes



FBX – Fly box 95 x 95 x 25 mm
188 foam slots.

FBR1 – Fly box 84 x 84 x 22 mm
60 foam slots.

FBR2 – Fly box 165 x 84 x 20 mm
120 foam slots.

Leader material

TLF – Trout leader floating
(1.5 - 1.9 - 2.3 - 2.7 - 3.0 - 3.6 m)

LF – Grease for leaders.

Floatant

CDC oil – Fly floatant

Dryers

AA6 – AMADOU sheet
105 x 150 mm

DA1 – AMADOU dryer
50 x 75 mm, 2 layers

DC1 – CHAMOIS dryer
50 x 75 mm, 4 leather layers

Fly Fishing Accessories

FBX fly box is designed for the FV-200 vest; the half box is attached with Velcro™ in the fold-down tray.

The Y-section foam is ideal for barbless hooks. With 188 foam slots, the FBX box can easily hold 100 or more trout flies.

FBR 1 and 2, perfect standard fly boxes, light weight, with transparent lids.

Favoured by many anglers for over a century, **AMADOU** is one of the best materials for drying flies while still protecting the hackle. Our AMADOU is obtained from sustainable sources and receives a special treatment to make it soft –- ideal for CDC flies.

Smaller pieces of amadou can be cut from the large sheets of raw material (**AA6**).

The **DA1 Dryer** is best we have seen. It is a stylish accessory and the two waterproof leather sides help keep the amadou clean and dry, especially from wet fingers.

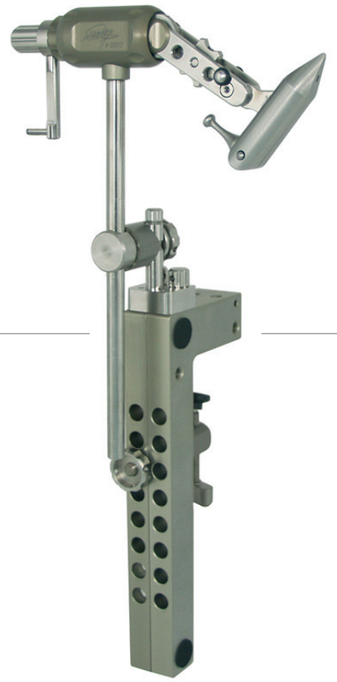
The **DC1 Dryer** uses four layers of chamois and absorbs a lot of water. It is a good alternative to amadou, but not as soft.

With its conical taper, knotless and non-stretch properties, the **TLF Leader** provides a superior presentation. There is one size only – just add the tippet of your choice.

CDC-oil is used not only to help float your dry flies but it acts like a "barrier cream" to protect your flies from fish slime.

MASTER version

Awards
Best New Accessory 2nd 2007, Efftex – EU
Moulinet d'Or 2007, Pêche Mouche – FR



C-clamp setting

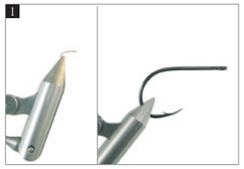
Extension arm setting

Base setting

BASE version

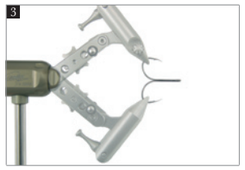
C-CLAMP version

Features



Hooks range from #32 to 9/0

Easy parallel grips with lever



True rotary feature
Rotation breaking system

Removable indexed handle
(2 positions)

Double material clip

Tube fly mandrel
Size: 0.8 - 1 - 1.5 - 2 mm

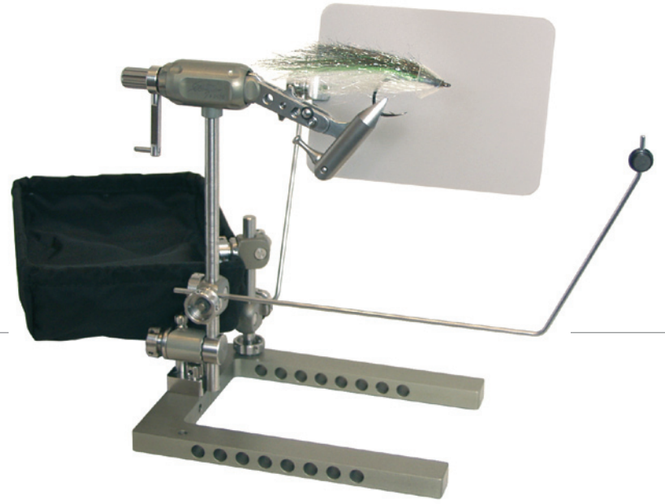
SWISS VISE

MASTER version – the most efficient.
As well as a high capacity, regular C-clamp (up to 100mm table thickness), the stem and the special locking nut allow for highly flexible extension arm positions. For example, at the horizontal position, fly bodies can be woven right in front of you. If required, the Master can also be used as a pedestal table vise.
The accessories support has four thread positions to allow you to customize and optimize your tying surroundings.
Light weight and versatile at 623 g.

BASE version
The heaviest at 1395 g. Perfect for home tying.
There are four conveniently-located pockets for storage of hooks, beads, cones, etc. This version has two thread positions for accessories support.

C-CLAMP version
The lightest at only 475 g. This version has one thread position for accessories support and is perfect when traveling.

The SWISS VISE is made of hard anodized aluminium and special stainless steel, and is delivered with written instructions, a DVD in French, English and German all contained in a soft travel case.



DAYLIGHT LAMP

Cold LED daylight
110 to 230 volts (EU/US standard)
For stem 8mm up to 10mm (3/8")
Contained in a soft travel case (360 g)

REGULAR version

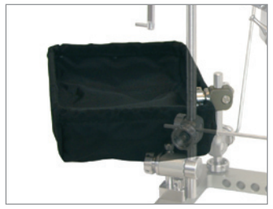
TOOL RACK version

Master c-clamp system

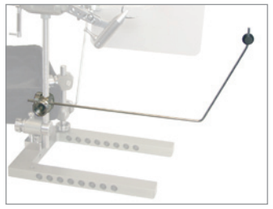
Light c-clam system

Heavy Base system

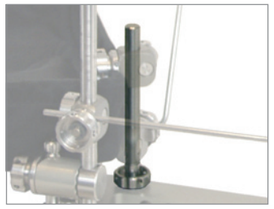
ACCESSORIES



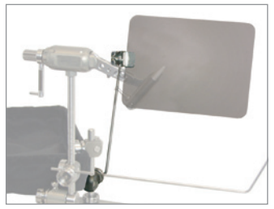
Trash bin



Bobbin rest



Accessories support



Profile plate

SWISS VISE ACCESSORIES

All accessories can be set directly on the vise stem or on the accessories support (both 8mm diameter).

Bobbin rest - Allows you to use the rotation feature and have the tying threads in line.

Profile plate - Comfortable to have a nice, uniform background (light grey color).

Trash Bin (15x10x40 cm) - Can be set up under your fly or on the side (out of the way), or on the accessories support.

Accessories support - Useful to offset all accessories.
Can be set up at various places around the vise.

All Swiss Vise heads are the same, however you can have different bases :

- The **Master C-Clamp system**, allows for a full 360° rotation, clampable onto tables up to 100mm thick, it also includes a light-weight (420g) pedestal table stand.
- The **Heavy Base system**, extremely stable at 1140g, perfect for home tying.
- The **Light C-Clamp system**, extremely light at 200g, perfect for travelling.

Both the **Regular** and **Tool Rack Daylight** versions are light weight (360g) including a Cold LED Light. This light is extremely versatile, having a long flexible neck giving you maximum freedom around the vise head. It also comes with dual voltage for worldwide use. The **Tool Rack** version allows you to store all kinds of tying equipment.
Both versions can be set up on stems 8 mm up to 10mm (3/8") and are delivered in a soft cloth case.

The **Bobbin Rest**, **Profile Plate**, **Trash Bin** and **Accessories Support** provide an ergonomic environment for your fly tying.

Magic Tool

The **Magic Tool** is undoubtedly an indispensable tool for every fly tier.

It will enable you to tie all kinds of flies and to use many components at one and the same time very easily.

You can create any pattern you can possibly think of which, up until now, you may not have been able to visualize. Mixing different feathers (soft or stiff), natural or synthetic dubbing – the Magic Tool will do the trick! A whole new world of flies with exciting colours and materials will be opened up to you.

The idea is simple. It consists of placing all the materials needed for a fly (dubbing, hackles, CDC feathers, etc.) in one of the 3 special clips.

All the components are then aligned, trimmed and transferred from the clip to one of the two special clamps. The materials held by the clamp are then placed into a dubbing loop and this "hackle substitute" is wrapped around the shank of the hook - simple!

The Magic Tool comes with table clips, clamps and full instructions. Three wooden dowels are also supplied to help with winding and cutting synthetic material such as Flashabou and Crystal Flash in small strands of exactly the same size.

MP Tying Tools

We have developed a range of unique fly tying tools, based on 15 years experience. We have tried to create an organic harmony between form and function.

MP TT Bobbin (#25): The bobbin of bobbins. You could thread this bobbin without even looking and can also adjust the thread tension to your liking.
Thread spool replacement is effortless. The MP Bobbin incorporates a wire loop for thread dubbing loops and spins perfectly on its axis.

Clamp (**#10**): specially designed to partially close a dubbing loop to incorporate a second or third component.

Needle (**#20**): sharp with a short handle, this needle is perfect to split the tying thread.

MP-Pliers (**#30**): specially designed to grip up to 3 CDC feathers at a time. The spring grip system does not damage the stems yet holds them firmly. *Pat. Pending*

Whip-finisher (**#40**): the design allows you to tie tiny knots, especially useful for small hook sizes. The tool rotates through the handle.

MP-Twister (**#50**): the ingenious spring ring allows you to open and close your dubbing loop easily (no weight is needed).
In addition, the rotating handle, long arms and flexibility between the two, makes dubbing much easier by allowing the dubbing thread to be wrapped over the hook shank without interfering with the bobbin holder.

Scissors: (**#60** – Small & curved, **#61** – Medium & straight, **#70** – Large & straight) These have a simple yet functional design.

They are available individually or in sets *(see page 16)*.

MP-Floss
perfect for splitting tails and wings

#4 Black

PARDO
Famous Spanish hackle, perfect for tails (12 feathers).

MP Tying Tools

Three Sets (**#80 - #90 - #100**)of our unique MP fly tying tools are available and presented in their own exquisite, foam-sectioned boxes with transparent lids.

#80 - Set#1: Basic set, contains the most important tying tools.

#90 - Set#2: Same as Set#1 plus **#70 Large Scissors** - ideal for cutting long straight edges; perfect for use with Magic Tool.

#100 - Set#3: Same as Set#2 plus **#25 TT Bobbin** - contains everything the fly tyer needs.

For small flies, dubbing loops tend to incorporate too much thread. Using the **Split Second Thread** tying becomes easier, fly bodies are slimmer and you can dub and whip-finish your fly in one procedure.

The **MP-Floss** is excellent for thorax bodies and, being stretchable, is ideal for splitting tails and wings.

Straight, shiny, spotted, long and stiff, the famous **PARDO** hackles (Coq de Leon), have many uses and are perfect for tying tails.

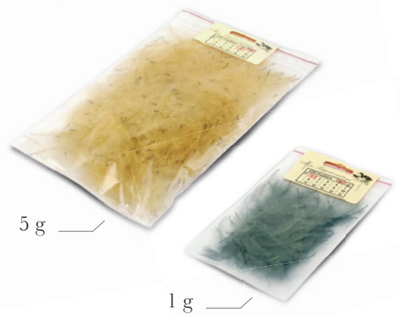
The characteristics of CDC (**C**roupion **D**e **C**anard)

Light and soft material.
Tough and strong fibers.
Semi-translucent; flies tied with CDC have a more life-like quality than flies tied with other, more opaque materials.
Highly aerodynamic; when cast, the CDC collapses but, at the end of the cast, it expands acting as a parachute as the fly descends to the water. It therefore makes casting easier and fly presentation more delicate.
Highly hydrodynamic – under water every filament pulsates with life even in the gentlest flow or on the slowest retrieve.
Folds like real fly tissue when a fish takes a CDC fly into its mouth. In this way, fish accept CDC flies more readily, and are much slower to reject them, than ones made of harder materials.



CDC oil

The CDC oil is used as a protecting "barrier" cream. A drop on the body of your flies will protect them from fish slime. The oil comes in a small bottle which can be attached to your vest.

CDC Feathers

CDC feathers were first used in fly tying in the 1920s in Switzerland with the two famous flies "Mouche de Vallorbe" and "Moustique du Jura".

In recent years the use of CDC has increased greatly, and we now use this superb material in all kinds of flies from dry flies and emergers to nymphs and streamers.

In addition to this, our Magic Tool technology gives us a whole new range of opportunities, mixing colours and components, both natural and new.

During the next decade, we are sure that many great patterns will be developed.

The secret of good fly tying is to use top quality materials. We pride ourselves in providing the fly tying world with the best CDC feathers available, both natural (in white, beige, and dark-black) as well as in a variety of dyed colours.

In order to preserve the very fine structure of our CDC feathers, we have developed our own, secret and unique production processes. Unlike other manufacturers, we specify that no detergents, acids, or excessive heating is used. In addition, we have special finishing processes that ensure our CDC feathers are the very best.

Magic Head &
Synthetics

Generally our larger flies incorporate different materials for different effects. For example, Ice FIBER fishes differently to Ice FUR. However, all our materials have just the right amount of pliability, neither too soft nor too stiff and we choose the right amount (quantity & length) to get the right FISH-CATCHING effect in the water.

Just try our flies in the water margin before fishing; you'll be amazed at their action.

Synthetics

Ice FIBER

Best for use with large streamers in salt- and freshwater.

Blue K. **#05** · Orange **#04** · Pink **#06** · Chartreuse **#03** · F. Yellow **#02** · Polar Bear **#01**

Ice FUR

Ideal for bodies and thorax sections of flies.

Grey **#05** · Black **#06** · Brown **#09** · Camel **#08** · Tan **#07** · Red **#04** · Chartreuse **#03** · Yellow **#02** · Polar Bear **#01**

CDC Flies: why, when and how?

Since 1990, I have created a comprehensive series of CDC flies that cover the entire range of trout flies, at all stages and for nearly all situations.

You will notice that the flies are numbered rather than named. This is because there is often very little to distinguish between the sub-imago stages of different species, so giving different names to, what would essentially be the same fly, would be impractical.

Similarly, in Europe, for example, there are tens of species named Baetis, yet they are all small to medium sized flies with olive and blue wings.

For us fly tiers (and anglers!) the most important characteristic to get right is the silhouette of the fly. In general, this is determined by two factors - the type of fly we are trying to imitate, and its life-cycle stage. For example, Mayfly, Caddis, Stoneflies, and terrestrials all have different shapes. Within each of these groups, different stages in their life cycle will present the fly tier with a completely different set of patterns to tie. Lastly, but still important, the size of fly should be chosen and its colour.

After tying on a dry fly, apply just one drop of our CDC oil to the body of the fly. As well as waterproofing the fly, it will protect it against fish slime, acting as a kind of “barrier cream”. This will significantly enhance the durability of your dry flies.

Once you have caught a fish, the following action will help clean any fish slime off CDC-treated flies. First, strip off about 3 meters of line and cast forward forcefully so that the fly hits the water hard and sinks. Let it sink about 30cm, point the rod at the fly and take up any slack line so that the line, rod, and arm are all in line. At this point raise the rod sharply so that the fly moves quickly through the water so removing any slime from the CDC-protected fly.

For small flies (size #14 and smaller) we recommend that a few rapid false casts will be enough to dry your CDC-treated fly sufficiently well to be cast out again.

For larger sizes, clean it in the water and use the amadou to dry it.

CDC is by far the best substance to give the illusion of a natural live insect above, as well as below, the surface.

WDB – Wooden display box with 40 compartments, 36 x 27x 45 mm.

Magic Head

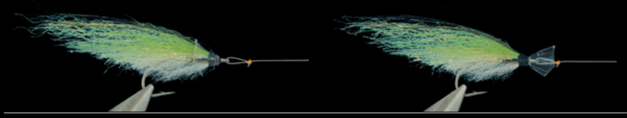
Awards

Gray's Best 2006, Gray's Magazine – USA
Top 10 2006, Fly Fishing Trade – USA
Moulinet d'Or 2005, Pêche Mouche – FR

The Magic Head will change the way you fish and the way fish react to your flies. The versatile Magic Head can be fished pointing backwards, giving your flies a normal streamer-style, up and down head action; or they can be flipped forwards, giving your patterns more side-to-side action.

Advantages
- Soft and lightweight head
- Does not reduce the gap of hooks
- Streamer action and wiggling action
- Made from a non-toxic component
- Easy to tie
- Does not need a rotating device
- Will not break or damage the tip of your rod (if accidentally wound back into the rod tip)

Recommendations
- Straight eye hooks are recommended specially for small sizes.
- When you need to weight your flies:
  - You can use brass or tungsten eyes below the hook shank.
  - Or use heavy wires along the hook shank and bend.
  - Or apply a bead up to the eye before applying the Magic Head.
  - Tying materials on top will keep the weight of the hook bend balanced with the Magic Tool



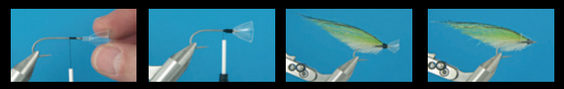
An open knot will allow your fly more movement.
Perfection loop knot

Magic Head sizes
R14 for # 1 - 6/0 (4/pkg)
R13 for # 4 - 2/0 (6/pkg)
R12 for # 12 - 6 (6/pkg)
R11 for # 16 - 12 (6/pkg)
R10 for # 20 - 16 (6/pkg)

Magic Head & Synthetics
A good choice.

DVD (French & English)
Introduction
PAL / NTSC - Time 55'

Magic Head tying



Start by forming a layer of thread, push the Magic Head over the hook eye, secure with some wraps of tying thread, then complete the fly. Straight shank hooks recommended.

Adjust the size of the Magic Head to the hook size by cutting down, following the edge. Cutting, on the weighted side, we will increase the wiggling effect by 30%.

You can weight your flies using beads, cones or eyes.
One thing to remember, the cut should always be on the weighted side.

and tension control

For all the creations

2010

Since 1990 we have developed a small, yet comprehensive range of fly fishing products for the modern angler. Over the years, we have introduced many new and imaginative products to the market. Irrespective of their cost or complexity, all are aimed at giving the innovative fly tier the ability to make and develop better flies.

We are proud that our products have been honoured with **15 international awards**.
